Shown: LS3612 in Ice White Shaker. The 33" (LS3309) and 36" (LS3612) lazy Susans go together the same way.

BEFORE YOU START

Get ready

You'll need

- Phillips screwdriver, or a drill/driver on a low speed
- A helper
- A clean, flat work area

In the box

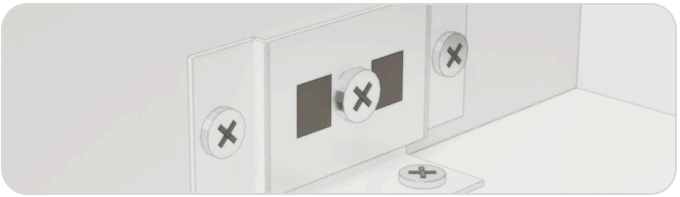

- 2 side panels and 2 back panels
- Large face frame and C-shaped face frame
- Bottom panel and upper panel, each with its tray
- Angled back panel, 2-piece toe kick, 2 corner braces
- Bi-fold door (2 halves) with hinges
- Hardware: screws, magnetic catches and plates, door bumpers

Check every panel first. Open all boxes and look over each panel before you start. Contact Cabinet Giant right away if anything is damaged or missing.

Pick your hinge side first. The door hinges go on the C-shaped face frame, so build that half on the side you want the door to open from.

One guide for both sizes. 33" and 36" lazy Susans go together the same way.

Protect the finish. Don't open the box with a sharp blade near the panels. Flatten a box and use it as a work pad.

How the clips work

Every panel comes with its metal clips already attached. The connector tab slides under the receiving clip, then one locking screw through the center holds them together.

TIP Loosen or tap

Loosen the two screws on each receiving clip a half turn so the panels slide in easier, and tighten them again before the locking screw. Or tap the panel's edge into the clips with a rubber mallet.

1 Pick your hinge side first

The hinges go on the C-shaped frame. The large frame goes on the other side and connects to the back panel with the 4 short wood blocks.

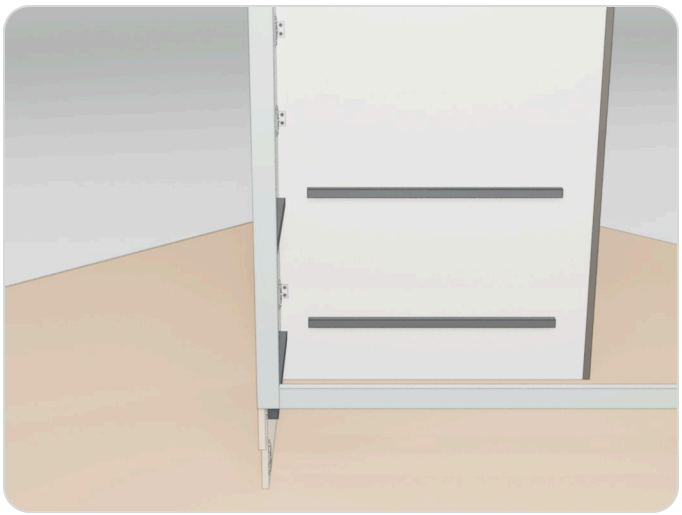

2 Build the hinge-side half

Lower the side panel onto the back panel with the 4 short blocks so the clips hook together. Drive a locking screw into each clip.

3 Build the other half

Repeat with the other side panel and the back panel with the 2 long wood strips.

4 Attach the large frame

Lower it onto the front of the other half so its tabs slide under the side panel's clips. Lock both clips.

5 Attach the C-shaped frame

Attach it to the hinge-side half the same way. Its pre-drilled holes are for the hinges.

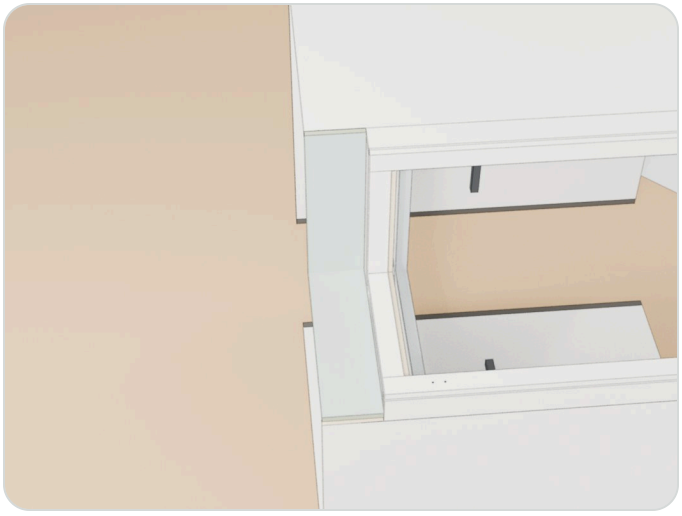

6 Join the halves

With a helper, stand the halves together so the large frame's far end slides into the clips on the back panel. Lock both clips, then drive the 4 screws where the frames meet.

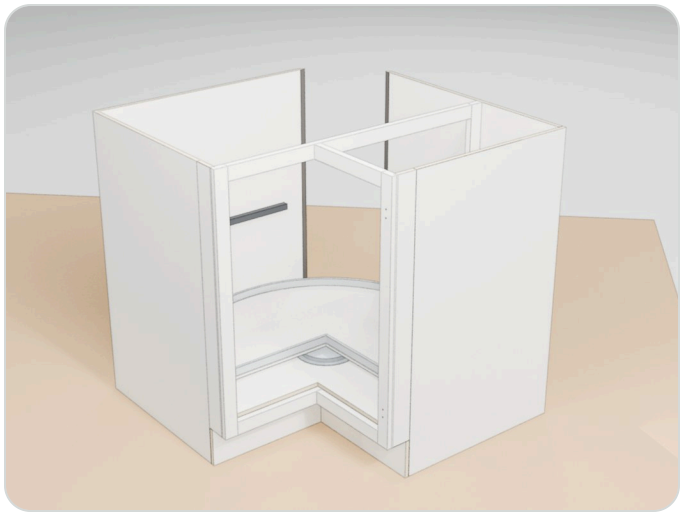

7 Add the bottom panel

Lay the cabinet on its back. Set the bottom panel, tray already on it, onto the wood strips and screw it down.

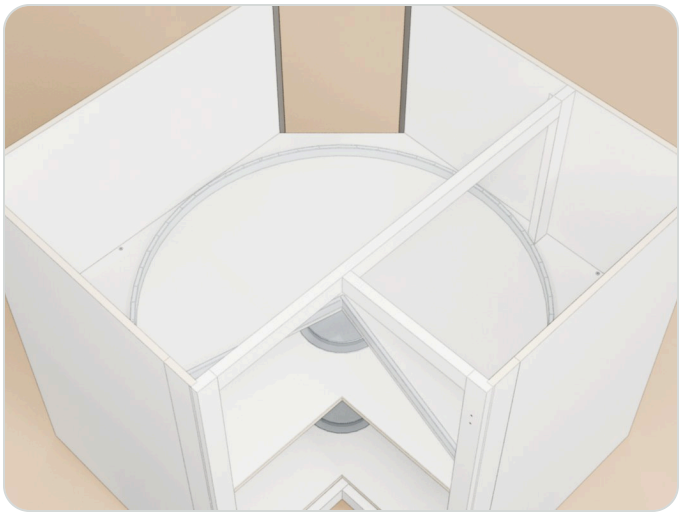

8 Add the toe kick

Slide the two toe-kick pieces into the clips. Then drive 2 screws to join them at the corner.

9 Stand the cabinet up

With a helper, tilt the cabinet upright.

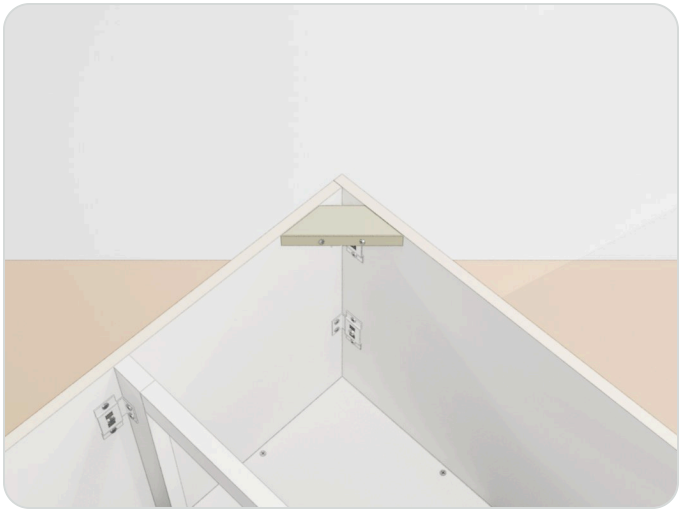

10 Add the upper tray

Angle the upper tray panel in, rest it on the wood strips and screw it down.

11 Add the angled back

Slide it down into the grooves at the back corner. Drive the 2 screws at the top.

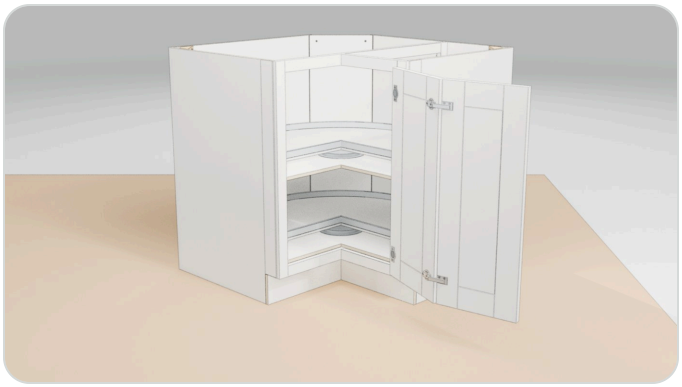

12 Add the corner braces

Screw a brace into each back corner where the side and back panels meet, flush with the top edges.

13 Prepare the door

Screw the hinges into the round cups on the back of the door. Join the two halves with the bi-fold hinges.

14 Hang the door

Close the door into place and screw the hinge plates to the inside edge of the C-shaped frame.

15 Add the magnetic catches

Screw the 2 catches to the inside edge of the large frame, top and bottom, and the metal plates to the door so they line up.

16 Add the bumpers

Stick a bumper at the top and bottom of each door half, on the back.

Assembly complete

Your lazy Susan is assembled and ready to install. Each tray turns on its own.
